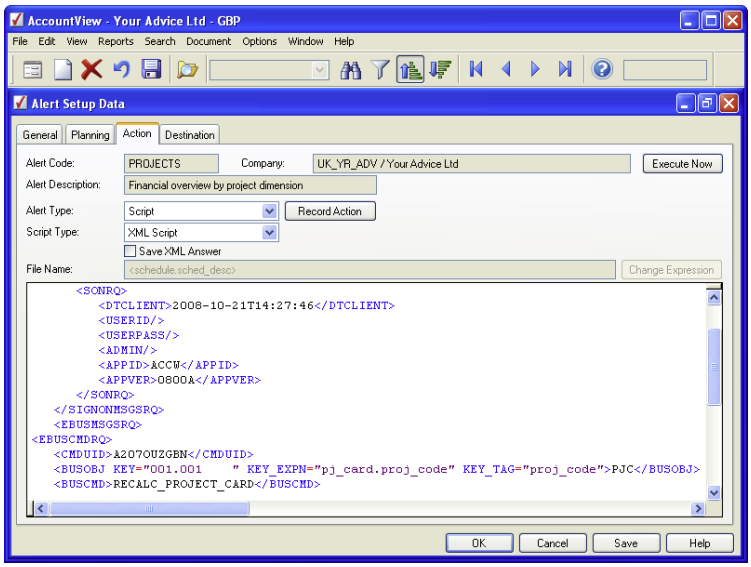
BUSINESS

BUSINESSALERTER II

Do you want to fully automate your business processes?
If so, you can use the script alerts of the *BusinessAlerter II* module.



With the *BusinessAlerter II* module you can use an XML script to execute multiple consecutive menu commands in the same script alert.

FOR WHOM?

For everyone who wants to run their business processes fully automatically, based on a predefined planning schedule.

ADVANTAGES

- Complete automation of your business processes and complex actions.
- Extensive possibilities, thanks to the use of XML and Visual FoxPro scripts.

SCRIPT ALERTS

Scripts enable you to define non-standard filters, use calculations, and edit data. You can use a single script alert to execute multiple consecutive commands. For example, you can use one to first recalculate your projects and then – in the same alert – send a report about your projects. Scripts can also be easily modified using conditions ("if-then-else" constructions). For example, compose a daily report on your outstanding items. Send this in the default view from Monday to Thursday, but in the detailed view on Friday.

COMPLETE AUTOMATION

Benefit from the extensive facilities offered by script alerts. Let AccountView perform (elements of) your business processes automatically, based on a predefined schedule. For example, use a script to send invoices by email and then print a report on the revenue per cost centre.

* It is an extension to the *BusinessAlerter I* module.
